

OPL Technology Menu

Electrolux is a global leader in developing sustainable “green” products designed to increase productivity while lowering water and energy consumption. With more than a century of experience behind every machine, Electrolux Professional washers, dryers, and ironers offer unique benefits, are simple to operate, and effective at lowering costs. For the 6th consecutive year, Electrolux was named sector leader by the Dow Jones Sustainability Index.

Automatic Savings

Lower water consumption by 50% or more with every load. With each wash cycle, AS determines the weight of the load and adds precisely the right amount of water resulting in reduced water consumption and energy costs. Works with Smart Dosing to ensure the correct amount of detergent is added, saving chemicals.

Compass Pro

Innovative, flexible, and simple to use. One knob does it all: program selection, diagnostics, and custom programming.

- 55 standard programs, 15 custom
- 20+ languages available
- USB on front of machine, easy to customize programs
- Real time clock for delayed start - Smart Start

High Spin 450 G-force Extraction

Faster drying time and lower gas consumption with Electrolux High Spin washers– now at 450G. Soft-mount for easy installation on upper floors and over basements.

Smart Dosing

Working with Automatic Savings (AS), Smart Dosing automatically adjusts the ratio of laundry chemicals to water resulting in lower costs, longer linen life and a superior wash.

SuperBalance / Power Balance

Extend the lifetime of your washer. Automatically calculates the unbalanced load in the drum, then adjusts distribution and extraction speeds. Lower maintenance costs, less vibration, maximum water extraction, and lower energy costs.

Clarus Control

Fully programmable, menu-driven micro-processor control combines timing, optimal water levels, and temperature programming.

11 standard wash programs and up to 192 custom programs. Smart Card interface allows off-site programming by chemical company professionals.

Certus Management Info System

CMIS software records in real-time, all the data you need to maximize production, minimize costs, and document every

processed load with an audit trail. Invaluable for validating the laundry process in healthcare applications.

Integrated Weighing System

Perfect for high-volume laundries, IWS improves productivity by accurately measuring the amount of laundry you are

processing. Combine this with Certus Management Information System for optimum processing efficiency.

Auto Stop

Prevents overdrying and wrinkles by detecting when the load is dry. It then turns the burner off and goes to cool-down, resulting in longer linen life and energy savings.

Residual Moisture Control

Prevents damage to linens caused by overdrying and reduces lint and wrinkles by automatically stopping the dryer when

the exact pre-set moisture level is reached. The precise amount of residual moisture in the fabric after drying is important for proper finishing. You'll benefit from longer linen life and significant labor and energy savings.

Reversing Dryer Cylinders

Electrolux reversing dryer cylinders use 1-phase power. Reversing dryer cylinders improve dryer efficiency and minimize

tangling and wrinkling. Sheets and towels dry faster, saving you energy and time.
